BR Series

The BR Series is Vogler's box rib metal wall panel line: bold, square-shouldered ribs 1⅜" deep on a nominal 12" panel, in four rib patterns you can mix on one elevation for a strong architectural wall. Concealed fasteners keep the face clean, and every profile comes in a no-clip version or a clip-fastened version that handles thermal movement on panels over 20'. Runs horizontal or vertical on commercial buildings, schools and equipment screens; a perforated aluminum option is available for screening applications. Kynar PVDF finish. Comparable to PAC-CLAD Precision Series Box Rib 1–4, fabricated and installed by Vogler Sheet Metal in Houston.

PRODUCT DETAILS

Profile	Square-shouldered ribs, four rib patterns
Coverage	12"
Depth	1⅜"
Uses	Wall (H or V), equipment screens
Notes	Mixes with WV 16; perforated alum option; clips over 20'

KEY FEATURES & BENEFITS

- Four patterns can be combined on one elevation
- Clip-fastened option accommodates thermal movement
- Concealed-fastener face
- Square-shouldered ribs with 1-3/8-inch depth
- Horizontal or vertical installation
- Perforated aluminum option for screening
